

DELTA MAXX™

Nanofiber Technology

DeltaMAXX™ Nanofiber Technology Outperforms FARR's HemiPleat™

Imperial Systems, Inc.
DeltaMAXX™ Nanofiber Filtration Technology is the most advanced technology media and pleated cartridge elements for use in FARR APC Brand Dust Collectors. DeltaMAXX™ Nanofiber has the finest fibers and highest MERV rating in the industry. DeltaMAXX™ Nanofiber will increase efficiency, reduce emissions and lengthen filter service life in your FARR APC Brand Dust Collector.

FEATURES / BENEFITS

- The industries smallest available fibers provide the best available filtration efficiency on sub micron particulate - **MERV 15**
- DeltaMAXX™ Nanofiber allows for surface loading filtration - **EASY PULSE CLEANING**
- Lower initial & operating pressure drop
- Unmatched release properties will offer reduced cleaning cycles
- Saves compressed air and energy costs
- Reduced outlet emissions = **CLEANER AIR**
- Less pulsing and stress = **LONGER FILTER LIFE**
- Reduced downtime
- Fewer filter changes = **Lower Disposal Cost**

DELTA MAXX™

Nanofiber Technology

ASHRAE 52.2 MERV Rating

Independent lab tests show that Imperial Systems' DeltaMAXX™ Nanofiber Technology is the only cartridge with a MERV 15 rating based on ASHRAE Test Standard 52.2. DeltaMAXX™ Nanofiber Technology is more than 50% more efficient on 0.3 - 1.0 micron particulate than the FARR HemiPleat™.

Mass Emission Testing

In full lab testing utilizing an eight (8) cartridge dust collector, Imperial Systems' DeltaMAXX™ Nanofiber Technology stabilized at a much lower pressure drop than the competition, requiring less pulse cycles. The FARR HemiPleat™ pulsed 94% more often than DeltaMAXX™ Nanofiber Technology. Less pulsing saves compressed air and reduces stress on the filter leading to a longer filter service life.

Mass Emission Testing

In full lab testing utilizing an eight (8) cartridge dust collector and atomite for test dust, Imperial Systems' DeltaMAXX™ Nanofiber Technology emitted 97% less contaminant than the FARR HemiPleat™. The key is the nanofiber not the substrate. Superior submicron (0.3 - 1.0 microns) particle capture leads to lower emissions of contaminant.
